Relaxation-assisted circuit interpretation · Synthetic planted circuits only
A. Forecasting intervention effects
Mean absolute error (probability units)
Unary labels
Relaxation
Exact graph MAP
Direct-effect ridge
Familiar
Noisy features
Damaged graph
New motif
B. Asking more is not enough
Error on fixed, unqueried target units
familiar / random
familiar / disagreement
novel motif / random
novel motif / disagreement
Queries to eligible units
C. Suppression is not a selective fix
Actual change in output probability
Chosen ablation reduces both contexts
Permitted context
Blocked context
